

DISX[®]

Secure Managed Services

Delivering cyber secure data collaboration,
communication and productivity.

LOGIQ

INNOVATE. COLLABORATE. DELIVER.

DISX® is Logiq's rapidly deployable cloud-based secure managed service.

Built around M365 for maximum productivity, DISX provides an out-of-the-box, secure data collaboration and communications solution for the Ministry of Defence, Central Government, Civil Nuclear and the wider public and private sectors.

Certified to ISO 27001 and ISO 20000, Logiq have significant experience in designing secure networks specifically to meet the security standard required to hold HMG sensitive information. As such, DISX has been developed as a highly secure solution compliant with Cyber Essentials and DCPD requirements while remaining extremely efficient, cost-effective and underpinned by best-in-class customer support.

Combining security and functionality, the DISX system is relied upon by the MOD and Defence industry to collaborate on sensitive projects, but also provides an unrivalled secure cloud service for all organisations handling sensitive data and subject to stringent regulations.

DISX PROVIDES:

- DART accredited and Secure by Design aligned cloud-based system that allows the secure storage and transfer of MOD Identifiable Information, including OFFICIAL-SENSITIVE data via the RLI
- Microsoft 365 applications providing secure email, office productivity and collaboration tools
- Full service support, including support desk provision and ongoing System Security Management
- Zero trust architecture and multi-layered, robust security controls, including:
 - Secure Internet Gateway
 - Intrusion Detection and Prevention
 - Security Incident and Event Management
 - Vulnerability Assessment
 - Denial of Service Protection
 - Malware, Phishing and Firewall Protection

KEY DISX DELIVERABLES:

Assured Security	Communicate and work collaboratively on a secure, affordable, and assured cloud platform to deliver OFFICIAL-SENSITIVE outputs into MOD/Other Government Departments as well as instant, secure, email connectivity and access to the M365 Suite.
Rapid Deployment & Scalability	First user live within weeks. Scalable, from 5 to 5000+ users
EUD	Access via a wide range of End User Devices including physical (desktop, laptop, mobile) and virtual/ cloud hosted for enhanced collaboration and flexibility.
Flexibility	Cost effective pricing model to flex with the Client requirements based on user numbers and bandings. Accessibility to secure platforms at low or no CAPEX requirement. Flexible contract terms associated with project timelines
Seamless User Experience	Users are provided access to dedicated Secure Collaborative Environment with provision of hardened UAD or can utilise BYOD (phone/tablet) with access to standard Microsoft Office Suite.
Bespoke Planning & Delivery	Our specialist Security and Information Assurance experts work with the Client to establish current and future business requirements. A tailored service will be designed where appropriate.
Data Migration	DISX® enables migration of data from existing on-prem and cloud storage, into the secure collaborative environment. We will undertake feasibility and security assessments against migration requirements and minimise business impact.
Extensive Security and Support Service Management	DISX® is supported by a service desk with ongoing Assurance and Compliance casework managed on the customer's behalf. Full change process, including security evaluation, to meet emerging requirements.
Compliance	DISX® has been configured to meet the requirements for Cyber Essentials and CE+ scheme along with DCPD requirements. DISX® is permitted to store/process OFFICIAL information, including with the SENSITIVE caveat.

DISX AIR

SECURE STREAMLINED CAPABILITY

DISX Air is a streamlined service to meet the user requirements of a legacy, end-of-life, Official tier secure communications method and provides accounts for up to 3 users sharing a single physical device.

DISX Air ensures the continuation of Ministry of Defence (MOD) and Other Government Department (OGD) communication without requiring integration into day-to-day IT systems. Air simultaneously enables contractors to quickly pivot to a new system, a system that goes beyond like-for-like, boasting familiarity and ease of use, all backed by Logiq's accredited industry expertise and support.

KEY FEATURES

Providing seamless direct connectivity into MOD Secure Services and the r.mil.uk mail domain, DISX Air also offers M365 web apps, internet browsing, printing and major document storage and viewing options as standard, ensuring not only enhanced functionality, but maximum collaborative productivity.

- Streamlined secure collaboration and communications at the OFFICIAL Tier.
- Email (r.mil.uk and internet)
- RLI, MODCloud and DEFNet access
- M365 web apps
- Internet browsing, Printing, Document Storage, PDF Viewer
- Shared environment
- Self-service portal and phone support
- Access methods: Logiq supplied laptop or cloud hosted machine.

DISX LITE

SECURE FOCUSED PRODUCTIVITY

DISX Lite was developed as a specialised solution for clients whose requirements are less dynamic in nature.

Retaining the same level of secure communication capabilities and efficient, familiar productivity tools (inc. Microsoft 365 desktop apps), DISX Lite offers focussed functionality for organisations who do not foresee a need to scale the implementation to support additional third-party applications and do not require enhanced SLAs, or a dedicated environment.

While offering a more curated set of features and tools – available as standard in DISX Pro, Lite has been finely tuned and designed with a laser focus on delivering best-in-class secure collaboration and communications at the OFFICIAL Tier.

KEY FEATURES

Underpinned by Logiq's unwavering commitment to security, DISX Lite represents a truly cost-effective method to enable critical, secure communication with MOD and OGD, without compromising on flexibility or productivity.

- Off-the-shelf service providing secure collaboration and communications at the OFFICIAL Tier.
- Teams, Email (r.mil.uk and internet)
- RLI, MODCloud and DEFNet access
- M365 web and desktop apps
- Internet browsing, Printing, Document Storage, PDF Viewer
- Shared environment
- Self-service portal and phone support
- Access methods: Laptop or Cloud Hosted Machine

DISX PRO

FULLY FEATURED SECURE WORKSPACE

DISX Pro is Logiq's secure, collaborative DART-registered secure managed service. It has been specifically designed for and with the Defence industry and the MOD.

As a digital workspace solution built around M365 apps, DISX Pro incorporates familiar and sleek modern working solutions, including messaging, document production, storage, collaborative working, video and telephone conferencing, as well as design production tools. Whilst these tools promote a highly flexible and creative way of working, they are also protected by cutting-edge security. DISX Pro enables the storage of and collaboration with MOD official and sensitive data. Not only this but as a virtual workspace DISX Pro also promotes modern working practices such as Bring Your Own Device (BYOD). This reduces duplication of working devices, reducing costs, emissions, and time. The fact that DISX is so flexible and secure a solution means that it is incredibly scalable as it can be tailored to fit specific departmental, output-orientated, requirements.

DISX Pro is delivered as a fully managed and supported service IT infrastructure. We have a dedicated support team delivering industry-leading support to all customer queries and individual users. This way, we can ensure that the integrity and security of your bespoke solution package can always be maintained.

KEY FEATURES

DISX Pro is the ideal solution for customers looking to adopt, integrate and deploy a secure IT system throughout their organisation, without compromising on capability and productivity.

- Off-the-shelf service providing secure collaboration and communications at the OFFICIAL Tier.
- DART accredited and Secure by Design aligned
- DCPD and Cyber Essentials compliant
- Teams, Email (r.mil.uk and internet)
- RLI, MODCloud and DEFNet access
- M365 web and desktop apps
- Internet browsing, Printing, Document Storage, PDF Viewer
- Mobile device access (iOS/Android), custom domain, multi-team collaboration environment
- Dedicated environment
- Gold SLA with self-service portal, phone and email support with rapid resolution
- Access methods: Desktop, Laptop or Cloud Hosted Machine

DISX AI

using Microsoft 365 Copilot

MORE PRODUCTIVE.
MORE COLLABORATIVE.
MORE ANALYTICAL.

Some of the best innovations come from unlikely pairings — the fusion of art and science in architecture, or the blend of logic and intuition in problem-solving. In the same way, combining a data-driven AI tool with a secure, OFFICIAL-tier collaboration environment creates a powerful and unexpected synergy.

As a market-leading secure managed service for defence and central government departments with a requirement to collaborate on OFFICIAL-SENSITIVE data, Logiq's DISX platform is built around the Microsoft 365 suite of apps for maximum efficiency.

DISX PRO: Enhanced

Demonstrating the art of the impossible, and in line with Logiq's continuous programme of innovation, DISX AI builds upon the already feature-rich DISX Pro by including the power of Microsoft 365 Copilot to deliver supercharged, AI-driven secure productivity benefits, even in highly regulated sectors.

Use Copilot to:

- Draft, edit and improve **Word** documents and generate summaries for lengthy content.
- Create formulas, analyse data and generate charts in **Excel**.
- Produce professional, compelling **Powerpoint** slide content and presentations.
- Manage your **Outlook** inbox, schedule meetings and respond to messages.
- Compose **Teams** chat messages, agendas and collaborative documents and summarise meetings.

Reliable, robust, proven security

Copilot doesn't create a parallel environment, but instead works within the existing DISX Pro compliance and security boundary providing critical reassurance, especially for highly regulated environments.

- Microsoft 365 Copilot inherits existing DISX security, compliance and privacy policies.
- DISX and Copilot align with industry standard GDPR principles and compliance.
- Data protected by comprehensive enterprise compliance and security controls.

Please visit the DISX website for the full list of security features.

SECURE APP HOSTING

Developed in line with government guidelines that enable the storage and processing of classified files, our Secure Application Hosting allows users access to licensed professional creativity, engineering and productivity software apps within the DISX managed security service environment.

From leading CAD and CAE solutions to illustration and mind-mapping, many leading and widely used apps have been approved and certified as trusted solutions to be installed and used on the DISX platform.

As part of the service and inherent with DISX, we take the hassle out of maintaining your essential apps including security patching and stability updates. Consistently monitoring and maintaining the DISX environment and your apps we can ensure frictionless operation and best-in-class security. Meaning you're free to focus on using your digital tools and not their maintenance.

CYBER ESSENTIALS

Cyber Essentials (CE) is a government-backed scheme that arms organisations with the knowledge and tools to defend against the most common cyber threats. Developed by the National Cyber Security Centre (NCSC), it guides businesses and charitable organisations through the process of implementing crucial security controls, minimising, and mitigating risks including phishing, ransomware, and unauthorised access such as data breaches.

Our goal is to make sure that security is the foundation of all businesses, which is why, by design, the DISX platform is CE-ready out-of-the-box, providing customers with the knowledge that they are meeting all the requirements needed to gain Cyber Essentials certification and meet industry-standard, minimum-security requirements.

As a trusted accredited certification body partnered with IASME, Logiq empower organisations of all sizes and complexity to combat common cyber threats and is assured to support businesses—through a full management approach—attain CE certification when delivered with the DISX secure managed service.

KEY FEATURES

- Stronger cyber defences: mitigate the risk of common threats, protecting data and systems.
- Enhanced reputation: demonstrate your commitment to cyber security, building trust amongst customers and partners.
- Reduced financial losses: minimise potential damage from cyber-attacks, safeguarding financial stability.
- Government procurement advantage: meet the cyber security requirements to enter the bidding process for select government contracts.
