

DISX[®]
SECURE COLLABORATION

Secure Collaboration. Without Compromise.

Move beyond simple file sharing with an ecosystem that secures your data from the cloud to the endpoint.

www.logiq.co.uk

Security that **works with you**, not against you.

The modern-day defence supply chain is one that involves teams working across departments, organisations, and locations. Sharing the right information with the right people is essential, but doing that securely can be complex.

DISX Secure Collaboration removes the barriers, giving you a platform to seamlessly share, manage and collaborate on sensitive information with confidence and control inside and outside your boundary.

Everything you need to **collaborate securely**

A managed Microsoft 365 environment designed for organisations operating within regulated or high-assurance environments, DISX establishes and operates a clearly defined collaboration boundary, governing identity, device posture, access policy and configuration change to support programme delivery.

Delivered by security-cleared personnel within a sovereign cloud environment, DISX brings people, content and conversations together in a secure environment designed for modern work.

Secure Information Movement
Share files and data securely across internal teams and external partners without compromising security.

Controlled Access
Granular, zero trust permissions ensure the right people have the right access, at the right time.

Visibility and Assurance
Comprehensive audit logs and monitoring give you full visibility and help you meet compliance requirements.

Built for the way you work, and the standards you have to meet.

DISX is designed to support the strict security, compliance and data requirements of government, defence and regulated industries.

Core Capabilities

Core Service

Secure managed service providing collaboration and communications at the OFFICIAL Tier. Sovereign cloud service, delivered by security cleared staff with dedicated environment and daily backups. SLA-backed support via self-service portal, phone and email.

Assurance and Compliance

CSMv4-aligned, DART accredited and Secure by Design aligned. Compliant with DCPD and Cyber Essentials and backed by ISO 20000-1 certified IT Service Management.

Connectivity and Collaboration

Microsoft Teams and secure email connectivity (r.mil.uk and internet). Microsoft 365 apps, web access, printing and document tools. Mobile access for iOS and Android with multi-team collaboration in a controlled environment.

Access and Integration

Connectivity into MOD and government-hosted services, including MCN, MODCloud and DEFNet. Access via desktop, laptop or cloud hosted machine to suit your operational model.

Features vary depending on the selected deployment profile, client/organisation integration requirements and existing technical controls.

Supporting secure collaboration across **regulated environments.**
